## Abstract

This package is intended to slightly improve the look of vanilla L<sup>A</sup>T<sub>E</sub>X –upon my standards– while remaining as light and versatile as possible.

## 1 What it looks like

## 2 The font

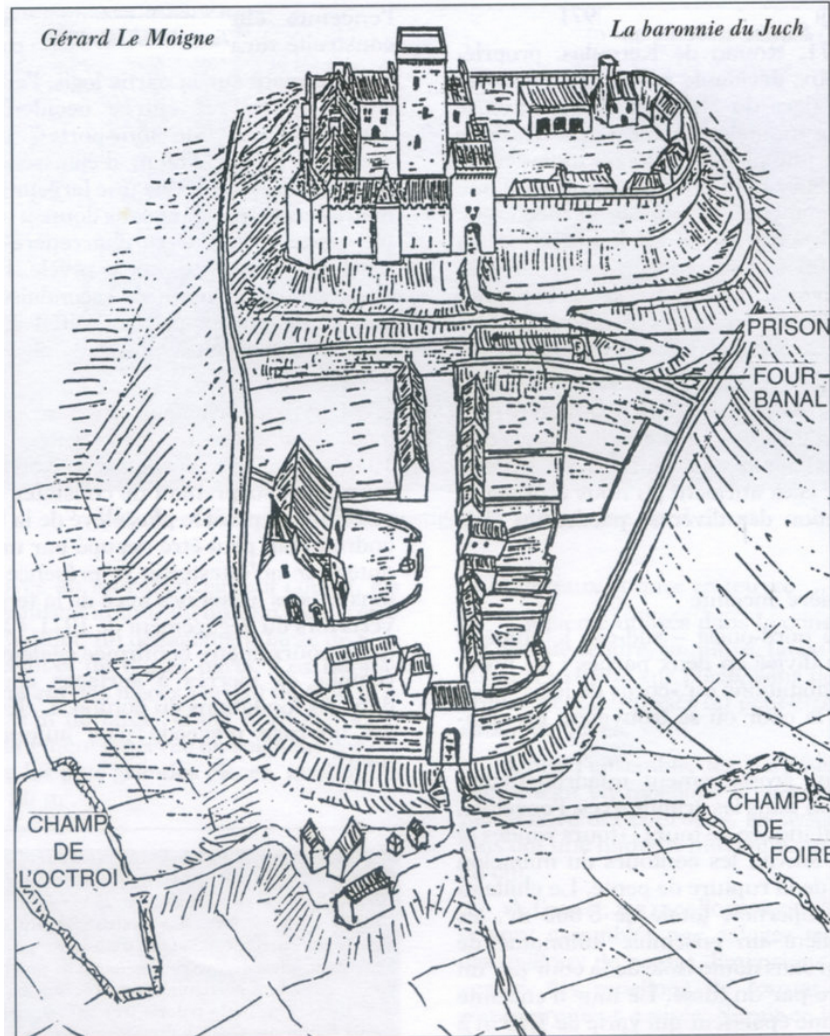

The font is `mlmodern`, a little bit thicker version of Latin Modern. The reduced stroke contrast makes it a bit less harsh to look at and more suitable for on-screen reading.

### 3 Captions

Captions change a bit, to make them more distinguishable. See figure 1.

### 4 Other changes

Right-justification is slightly improved with the `microtype` package. Page numbers are now on the right (outside for twoside documents). Margins are reduced so that the text takes more space.
